

PRODUCT GROWTH PLAYBOOK

MADCreate Ideas

Enhancement concepts and MADProspects Universe integration opportunities.

Document scope

Prepared from the current MADCreate repository structure, frontend routes, .NET Core modules, shared TypeScript contracts, Entity Framework Core, and deployment notes. Where infrastructure notes and code disagree, the documents call out the reconciliation point instead of hiding it.

Generated for MAD Prospects. Current canonical public domains: <https://madcreate.madprospects.com> and <https://madcreateapi.madprospects.com>.

Strategic Direction

MADCreate can become the front door for a broader MADProspects operating system: generate the website, capture demand, enrich leads, nurture prospects, recruit talent, manage campaigns, automate follow-up, and report everything back to one universe-level customer graph.

North-star idea

Position MADCreate as the creation layer: every business system in the MADProspects Universe can request a landing page, portal, campaign microsite, form, quote flow, recruiting page, or client workspace from MADCreate and receive a hosted, measurable, editable experience.

Near-Term Product Enhancements

Idea	Why it matters	Implementation sketch
Guided launch room	Turns onboarding into a visible launch checklist.	Show steps for brand, pages, AI draft, media, domain, analytics, forms, deployment, and handoff with completion badges.
Industry-specific blueprints	Makes first drafts feel less generic.	Seed template packs for recruiters, property, finance, legal, healthcare, training, agencies, trades, ecommerce, and local services.
AI brief quality score	Improves generation quality before spending tokens.	Score onboarding answers for specificity, missing audience, missing offer, weak proof, and missing CTA.
Section variant lab	Lets users compare several hero/pricing/CTA options.	Generate 3 to 5 variants, save favorites, and A/B test after publish.
Client review mode	Reduces feedback chaos.	Share a secure review link where clients comment on sections without getting full admin access.

Builder Enhancements

- Add drag-and-drop section ordering with undo/redo history and autosave snapshots.
- Introduce inline text editing directly inside the preview, with structured schema updates behind the scenes.
- Add block-level version history so an operator can restore a previous hero, pricing table, or contact section without reverting the whole page.
- Create a style inspector that edits theme tokens and immediately shows their effect across every page.
- Add accessibility checks for contrast, heading order, image alt text, button labels, and form labels.
- Add responsive preview breakpoints for mobile, tablet, laptop, and widescreen with screenshot export for approvals.

AI And Automation Enhancements

Capability	Value	Notes
Brand memory	Keeps generated content consistent across tenants and campaigns.	Store approved phrases, taboo words, tone rules, claims, audience segments, and proof points per workspace.
Research agent	Builds richer drafts.	Pull website/social/company data, summarize competitors, detect offers, and propose positioning before generation.
Content freshness monitor	Keeps sites current.	Schedule monthly checks for outdated dates, old offers, broken links, stale testimonials, and weak SEO titles.
Lead response agent	Speeds follow-up.	Draft email/SMS/WhatsApp replies from form context, source page, and MADLeads history.
Prompt governance	Makes AI work auditable.	Version prompt templates, show diff, approve changes, and tie each generation to template version.

MADProspects Universe Integration Map

The most powerful direction is to treat MADCreate as one app in a shared universe rather than an isolated website builder. The shared fabric should include identity, workspace/tenant mapping, contact/lead identity, events, billing, consent, media, automation tasks, and notifications.

Universe app	Integration idea	MADCreate benefit
MADLeads	Sync form submissions, page-source attribution, UTM data, lead status, scoring, and follow-up outcomes.	Every generated website becomes a measurable acquisition channel.
MADRecruiting	Generate job boards, role landing pages, candidate application funnels, interview scheduling pages, and employer-brand microsites.	Recruiters can launch campaign-specific pages without design or dev work.
MADSales / CRM	Push qualified leads, contact timeline, proposal links, and quote requests into the sales pipeline.	Website activity becomes sales context instead of a disconnected contact form.
MADMarketing	Launch campaign pages, A/B variants, newsletter signups, tracking pixels, and performance reports.	Campaign teams can move from brief to live microsite faster.
MADForms	Use a shared form builder and submission schema across all MAD apps.	Contact, quote, application, booking, and intake forms become reusable assets.
MADBilling	Provision subscription plans, usage limits, workspace invoices, and client billing portals.	Plans, quotas, and upsells can be managed centrally.
MADAnalytics	Aggregate events across websites, email, ads, CRM, and recruiting funnels.	Operators get a unified view of acquisition and conversion.
MADAssist / Agent layer	Let agents create pages, update content, triage leads, prepare reports, and execute deployment checklists.	MADCreate becomes action-capable, not just generative.

Shared Identity And Tenant Graph

The universe needs a canonical identity graph. A person may be a lead in MADLeads, a candidate in MADRecruiting, a client contact in CRM, a workspace user in MADCreate, and a billing contact in MADBilling. The applications should not create disconnected duplicates.

- Create a Universe Contact ID with source identities linked by email, phone, domain, company, and consent.
- Use a shared Workspace ID and Tenant/Client ID across apps so one client can move between website, CRM, recruiting, and billing workflows.
- Centralize role and permission grants while allowing app-specific capabilities.
- Emit normalized events: page_view, form_submit, lead_status_changed, candidate_applied, deployment_success, invoice_paid, campaign_launched.
- Add a consent and communication-preferences service for POPIA/GDPR-friendly marketing and recruiting communication.

Deep Integration Ideas

Workflow	How it works
Lead-to-site feedback loop	MADLeads identifies top converting industries/offers; MADCreate suggests better sections, CTAs, and proof blocks based on conversion data.
Recruiting campaign launcher	MADRecruiting sends job role, location, salary range, employer brand, and screening questions; MADCreate generates a live role microsite and application form.
CRM proposal pages	MADSales sends opportunity data; MADCreate generates a secure proposal microsite with pricing, timeline, FAQ, acceptance CTA, and analytics.
Automated client onboarding	A new MADProspects client triggers workspace creation, default tenant, starter site, analytics, lead sync, billing plan, and review link.
Universe command center	A shared dashboard shows websites live, leads captured, candidates applied, campaigns active, invoices due, and agent actions queued.

Integration Architecture Recommendations

- 1 Define a common Universe API contract for workspace, tenant/client, contact, event, consent, and notification objects.
- 2 Introduce an event bus or webhook gateway so every app can publish and subscribe without point-to-point spaghetti.
- 3 Adopt OAuth-style app installation for internal MAD apps as well as third parties.
- 4 Use idempotency keys for lead sync, form submissions, deployment callbacks, and billing events.
- 5 Build a shared integration registry with app capabilities, scopes, config schema, health state, and last sync timestamp.
- 6 Create a Universe audit log so high-risk actions remain traceable across apps.

Data Model Enhancements

Entity	Suggested additions
Tenant	universeClientId, lifecycleStage, primaryDomainHealth, brandMemoryId, defaultLanguage, complianceRegion.
Lead/FormSubmission	universeContactId, sourceCampaignId, consentSnapshotId, score, routingOwner, SLA deadline.
AIGeneration	promptTemplateVersion, inputQualityScore, approvalStatus, appliedAt, rollbackTargetId.
Deployment	environment, release notes, build hash, smoke-test result, rollback deployment id.
Integration	scopes, health status, last error, sync cursor, credential vault reference.
AnalyticsEvent	session id, visitor id, campaign id, contact id, experiment id, consent state.

Commercial Packaging Ideas

- Launch-in-a-day package: onboarding, AI-generated site, domain, form, lead sync, and first campaign report.
- Recruiting growth pack: role pages, employer brand, candidate forms, calendar booking, and MADRecruiting sync.
- Lead engine pack: MADCreate site plus MADLeads routing, automated response templates, analytics, and conversion optimization.
- Agency operations pack: multi-client workspace, template library, client review portals, approval workflows, and deployment history.
- Enterprise governance pack: SSO, audit exports, prompt approvals, data residency, retention policies, and role-based publishing.

User Experience Ideas

Experience	Description
Launch timeline	A horizontal launch path showing brief, content, design, domain, integrations, QA, deploy, and optimization.
AI copilot sidebar	Contextual assistant inside every page: improve this section, explain poor conversion, generate FAQ, check tone, summarize leads.
Site health score	Combines domain status, SSL, analytics, form deliverability, SEO basics, performance, accessibility, and deployment freshness.
Approval inbox	Client comments, pending copy approvals, domain tasks, failed deployments, and stale leads in one focused queue.
Universe activity feed	Every important event from MADCreate, MADLeads, MADRecruiting, and billing in a unified timeline.

Analytics And Optimization Ideas

- Built-in A/B testing for hero headlines, CTAs, form length, pricing layouts, and testimonials.
- Conversion heat summaries by section, not just page, using click and form-start events.

- AI-generated monthly client reports with plain-English wins, issues, and next actions.
- Attribution stitching from UTM, referrer, form submission, lead status, CRM outcome, and recruiting outcome.
- Revenue or placement attribution when integrated with CRM, billing, or recruiting modules.

Deployment And Operations Ideas

Idea	Reason
Pre-deploy smoke tests	Automatically verify login-protected API health, render payload, form submission, sitemap, robots, domain, and CORS.
Rollback button	Let operators restore the previous successful deployment with one action.
Environment lanes	Separate draft, preview, staging, and production URLs per tenant.
Release notes generator	Summarize pages changed, sections edited, AI content applied, domains touched, and integrations affected.
Domain diagnostics	Explain DNS, SSL, proxy, and propagation issues in language a client can understand.

Governance, Safety, And Compliance

- Require approval for AI-generated legal, medical, financial, hiring, or regulated claims before publish.
- Add claim memory: every approved claim can link to source proof, while unsupported claims are flagged.
- Add data retention controls for leads, media, analytics events, and AI prompts/outputs.
- Keep secrets in a vault and store only references in integration config.
- Add tenant-level audit exports for enterprise customers and support investigations.

Suggested Roadmap

Horizon	Focus	Candidate work
0-30 days	Stability and polish	Smoke tests, CORS/domain diagnostics, launch checklist, builder UX cleanup, documentation, super-admin hardening.
30-60 days	Conversion loop	Lead sync to MADLeads, form builder, analytics reports, A/B section variants, client review mode.
60-90 days	Universe fabric	Shared contact/client IDs, event bus, internal app installation, consent service, activity feed.
90+ days	Agentic operations	Research agent, lead response agent, campaign launcher, automated optimization recommendations, release governance.

Top Ten Bets

- 1 Make MADCreate the page and portal generator for every other MADProspects app.
- 2 Build a shared Universe Contact and Client graph before integrations multiply.
- 3 Turn generated sites into measurable lead engines by syncing forms and analytics into MADLeads.

- 4 Give MADRecruiting one-click role microsites and application funnels.
- 5 Add client review links and approval workflows to reduce back-and-forth.
- 6 Create industry blueprint packs so first drafts feel immediately relevant.
- 7 Add site health scoring and monthly AI reports to support recurring value.
- 8 Centralize prompt governance and brand memory to protect quality at scale.
- 9 Add deployment smoke tests, rollback, and diagnostics to protect trust.
- 10 Commercialize bundles around launch, recruiting growth, lead generation, and agency operations.

Bottom line

The biggest opportunity is not merely making MADCreate a better website builder. It is making it the generative interface that turns business data from the whole MADProspects Universe into live, branded, measurable digital experiences.

Appendix A: Universe API Building Blocks

Building block	Why it matters	Fields to standardize
Universe Workspace	Keeps customers/accounts consistent across apps.	id, name, billing owner, plan, status, region, created source.
Universe Client/Tenant	Lets a client have sites, leads, recruiting jobs, campaigns, and invoices under one identity.	id, workspaceId, legal name, trading name, domains, lifecycle, industry, owner.
Universe Contact	Prevents duplicate people records.	id, emails, phones, names, company, consent, source identities, dedupe confidence.
Universe Event	Creates a shared activity stream.	id, app, event type, actor, object, timestamp, metadata, correlation id.
Universe Consent	Protects communication compliance.	contact id, channel, purpose, status, source, timestamp, proof URL.
Universe Notification	Coordinates email, SMS, WhatsApp, in-app, and task notifications.	recipient, channel, template, payload, status, retry count.

Appendix B: High-Value Integration Payloads

Payload	Producer	Consumer	Typical content
lead.created	MADCreate	MADLeads / CRM	Tenant, page, form id, contact fields, message, UTM, referrer, consent, score hints.
candidate.applied	MADCreate / MADRecruiting	MADRecruiting	Role id, candidate profile, CV/media links, screening answers, source page.
campaign.page_requested	MADMarketing	MADCreate	Campaign brief, audience, offer, deadlines, tracking pixels, brand rules.
proposal.page_requested	MADSales	MADCreate	Opportunity, pricing, case studies, stakeholder names, close date, acceptance CTA.
site.published	MADCreate	MADAnalytics / CRM	Tenant, domain, site id, version, pages changed, deployment target, smoke-test result.
invoice.status_changed	MADBilling	MADCreate	Workspace, plan, entitlement, billing status, grace period, feature limits.

Appendix C: Feature Backlog By Module

Module	Enhancement ideas
Onboarding	Brief scoring, competitor import, brand voice capture, proof library, launch checklist, approval owner assignment.
AI Studio	Prompt version diffing, output comparison, cost budget, apply preview, rollback target, generation annotations.
Builder	Inline editing, drag ordering, component marketplace, saved blocks, keyboard shortcuts, section comments, responsive previews.
Themes	Brand kit importer, contrast checker, font pairing suggestions, token history, global usage map.
Domains	DNS wizard, Cloudflare automation, SSL status, propagation explanation, one-click retry, client-friendly instructions PDF.
Deployments	Preview environments, smoke tests, release notes, rollback, deployment approvals, target health badges.
Integrations	Credential vault, sync health, OAuth scopes, event subscriptions, per-integration logs, test connection button.
Analytics	Funnels, section analytics, A/B testing, conversion attribution, client monthly report, anomaly alerts.
Leads	Scoring, assignment, SLA timers, duplicate detection, enrichment, follow-up templates, MADLeads sync.
Admin	Tenant impersonation with audit, feature-flag experiments, usage dashboards, support diagnostics, billing overrides.

Appendix D: MADRecruiting Integration Concepts

- Generate role-specific landing pages from job requisitions with location, salary, benefits, employer brand, and screening questions.
- Create candidate application forms that post directly into MADRecruiting with CV/media attachments stored through the shared media layer.
- Launch employer-brand microsites for clients with team, benefits, culture, open roles, testimonials, and candidate FAQs.
- Use MADCreate analytics to show which job pages convert, where candidates drop off, and which traffic sources produce qualified applicants.
- Add recruiter review mode so recruiters can approve page copy before publishing.
- Use AI to generate interview-prep pages or candidate nurture sequences after application.

Appendix E: MADLeads Integration Concepts

- Every MADCreate form submission should create or update a MADLeads lead with attribution and consent.
- MADLeads status changes should flow back to MADCreate analytics so pages can be optimized for qualified leads, not only raw form fills.
- MADLeads scoring can control dynamic CTA suggestions, lead magnets, or follow-up urgency in MADCreate.

- MADCreate can generate campaign landing pages from high-performing lead segments in MADLeads.
- Lead source quality can appear inside MADCreate site health and monthly reporting.

Appendix F: Experiment Library

Experiment	Metric	How MADCreate can support it
Hero promise test	CTA click-through	Generate several headline/value-prop variants and rotate by experiment id.
Short vs long form	Qualified submission rate	Use form schema variants and send variant id into lead records.
Proof block order	Scroll depth and conversion	Swap testimonials, stats, case studies, and FAQs per page variant.
Pricing visibility	Contact conversion and sales quality	Compare visible pricing tiers with consultation-first CTA.
Recruiting benefit angle	Candidate application completion	Test salary-first, culture-first, growth-first, and flexibility-first sections.
Lead magnet	Email capture rate	Generate downloadable guide, checklist, calculator, or audit offer sections.

Appendix G: Risk And Mitigation Matrix

Risk	Mitigation
Too many disconnected integrations	Build the Universe event/contact/client fabric first, then add adapters.
AI publishes inaccurate claims	Add approval gates, claim memory, source references, and regulated-industry warnings.
Operational complexity grows faster than support capacity	Add diagnostics, health scores, smoke tests, and admin support tools early.
Secrets leak through integration config	Store vault references only and redact all logs and PDFs.
Duplicate contacts across apps	Introduce Universe Contact IDs, dedupe rules, and source identity linking.
Templates become stale	Track conversion outcomes, review dates, industry pack ownership, and monthly freshness checks.
Database/provider migration confusion	Resolve and document the authoritative DB engine before expanding production data flows.
